Chapter 1 | Executive Summary

THALF Premium Handmade Chocolate is a luxury artisan confectionery brand committed to delivering extraordinary handcrafted chocolate experiences to discerning consumers. This document defines the complete Information Architecture (IA) and Sitemap for the THALF e-commerce website — a mobile-first digital storefront designed to convert visitors into loyal customers through an elegant, intuitive, and brand-consistent experience.

The THALF website is conceived as more than a transactional platform. It is a digital expression of the brand's craft, quality, and passion. Every architectural decision documented herein — from URL structures to navigation hierarchies — has been made with the dual objective of delivering measurable business outcomes while preserving the premium sensory experience the THALF brand represents.

Scope of this Document

This document covers the complete information architecture for three interconnected digital surfaces:

- Public-facing e-commerce website (consumer-oriented)
- Customer portal (authenticated self-service area)
- Admin portal (internal business management interface)

Strategic Context

Dimension	Strategic Position
Brand Positioning	Ultra-premium artisan chocolate; competes on experience, not price
Target Audience	Affluent adult consumers (25-55), gift buyers, corporate accounts
Key Differentiator	100% handmade, small-batch, ethically sourced cacao
Primary Channel	Direct-to-consumer via owned e-

Dimension	Strategic Position
	commerce website
Secondary Channels	Social commerce (Instagram, TikTok), corporate gifting
Geographic Focus	UAE primary; GCC expansion in Phase 2
Revenue Model	One-time purchase, gift sets, seasonal collections, subscriptions (future)

Key Design Principles

- Mobile-first, thumb-friendly interaction patterns throughout
- Luxury aesthetic that mirrors the premium product experience
- Minimal friction from product discovery to order confirmation
- SEO-first URL architecture for organic discoverability
- Accessibility compliance (WCAG 2.1 AA) as a non-negotiable baseline
- Scalable IA structure that accommodates future product lines and markets

Document Purpose

This IA document serves as the authoritative blueprint for all subsequent design, development, and SEO work on the THALF website. It must be read and signed off before any wireframing, visual design, or frontend development begins. Deviations from this architecture should be formally documented as change requests.

Audience for this Document

- ✦ UX Designers — wireframe and interaction blueprints
- ✦ UI Designers — visual hierarchy and component planning
- ✦ Frontend Developers — routing, component, and page planning
- ✦ Backend Developers — API endpoints and data structure alignment
- ✦ SEO Specialists — URL architecture and metadata strategy
- ✦ Project Managers — scope baseline and sprint planning reference
- ✦ Stakeholders — strategic alignment and sign-off

Chapter 2 | Website Objectives

The THALF website must simultaneously serve as a luxury brand statement and a high-performance commercial engine. The following objectives are ordered by strategic priority and are non-negotiable constraints on every architectural decision in this document.

Primary Business Objectives

#	Objective	Success Metric	Priority
01	Drive direct-to-consumer sales	Monthly GMV, conversion rate $\geq$ 3%	Critical
02	Deliver a premium brand experience	NPS $\geq$ 70, qualitative brand audit	Critical
03	Enable seamless mobile shopping	Mobile conversion $\geq$ desktop conversion	Critical
04	Support gift purchasing	% orders with gift wrap / gift message	High
05	Build customer loyalty	Repeat purchase rate $\geq$ 30% by month 6	High
06	Organic search acquisition	Organic traffic share $\geq$ 40% by month 12	High
07	Reduce customer service load	Self-service resolution rate $\geq$ 60%	Medium
08	Enable data-driven optimisation	Funnel analytics coverage 100%	Medium

UX Quality Targets

KPI	Target	Measurement Method
Time to first product page	< 2 clicks from homepage	Task analysis / usability testing
Add-to-cart to order confirmation	< 4 steps	Checkout funnel audit
Page load speed (mobile, 4G)	< 2.5 s LCP	Core Web Vitals — Lighthouse CI
First Contentful Paint	< 1.2 s	Lighthouse
Cumulative Layout Shift	< 0.1	Core Web Vitals
Accessibility score	WCAG 2.1 AA compliant	axe / WAVE audit
Bounce rate (homepage)	< 35%	Analytics

Guiding Design Philosophy

Every page and interaction on the THALF website should communicate three qualities simultaneously: craft, trust, and delight. Craft is communicated through editorial-quality product photography, considered whitespace, and deliberate typography. Trust is built through transparent policies, authentic brand storytelling, and friction-free returns. Delight is delivered through micro-animations, unexpected moments of beauty, and packaging-level attention to digital detail.

Chapter 3 | Information Architecture Principles

The Information Architecture of the THALF website is grounded in seven core principles derived from established IA theory (Rosenfeld, Morville & Arango) and adapted to the specific context of luxury mobile e-commerce.

Principle 1 — User Mental Models First

The site structure mirrors how THALF customers think about chocolate — by occasion (gifting, personal treat, seasonal), by type (bars, truffles, collections), and by flavour profile — rather than by internal business category logic. Navigation labels use customer language, not internal product taxonomy.

Application

Navigation uses: 'Gift Boxes', 'Seasonal Collection', 'Chocolate Bars' — NOT 'SKU Category A', 'Q4 Line', 'Confectionery Type 1'

Search autocomplete surfaces occasion-based suggestions: 'gift for her', 'dark chocolate', 'Eid collection'

Principle 2 — Progressive Disclosure

The site reveals information progressively, presenting only what is needed at each stage of the customer journey. The homepage communicates brand identity and top collections. Category pages reveal product breadth. Product pages provide full sensory and technical detail. This prevents cognitive overload while ensuring customers always have access to deeper information when they need it.

Principle 3 — Consistent Wayfinding

Users should always know where they are, where they have been, and where they can go. Every page implements breadcrumb navigation, clear page titles, and persistent access to the top-level navigation. The URL structure reinforces wayfinding — a customer can read a URL and understand their location in the site hierarchy.

Principle 4 — Mobile-First, Touch-Optimised Interaction

All primary interactions — browsing, adding to cart, reviewing, checking out — are designed for one-thumb mobile operation. Interactive targets meet the 48×48dp minimum size standard. Critical CTAs ('Add to Cart', 'Checkout') are anchored in thumb-reachable zones (bottom 40% of screen). Desktop enhancements are layered on top of the mobile-first foundation, not the reverse.

Principle 5 — Findability Through Multiple Pathways

Every product on the THALF website is reachable through at least three distinct pathways: navigation hierarchy, site search, and contextual cross-linking. This redundancy ensures that customers who browse, search, or discover through recommendation all arrive at the right product efficiently.

Product Reachability Pathway	Example
Navigation hierarchy	Home → Shop → Truffles → Dark Chocolate Truffle Box
Search	'dark truffle' → search results → product page
Homepage feature	Homepage hero or featured section → product page
Related products	Product page → 'You may also like' → product page
Collections link	Seasonal Collection landing → individual product
Direct URL	/product/dark-chocolate-truffle

Principle 6 — SEO-Structural Alignment

The IA is designed so that every significant commercial keyword cluster has a dedicated, indexable page. Category pages are the primary SEO landing pages for mid-funnel queries ('buy truffles Dubai', 'premium chocolate gift box UAE'). Product pages target long-tail queries. The URL structure is flat, descriptive, and keyword-inclusive without being keyword-stuffed.

Principle 7 — Scalability by Design

The current IA accommodates four product categories and two user roles. The architecture is designed to absorb future expansion — international markets,

subscription boxes, corporate accounts, recipe content, and a blog — without requiring structural redesign. New sections slot into the existing hierarchy rather than disrupting it.

Chapter 4 | Complete Website Sitemap

The following sitemap defines the complete public-facing website structure for THALF. Each page is assigned a unique identifier (Page ID) for cross-referencing throughout this document and for use in development tickets.

4.1 Sitemap Hierarchy Diagram

4.3 Checkout Flow Diagram

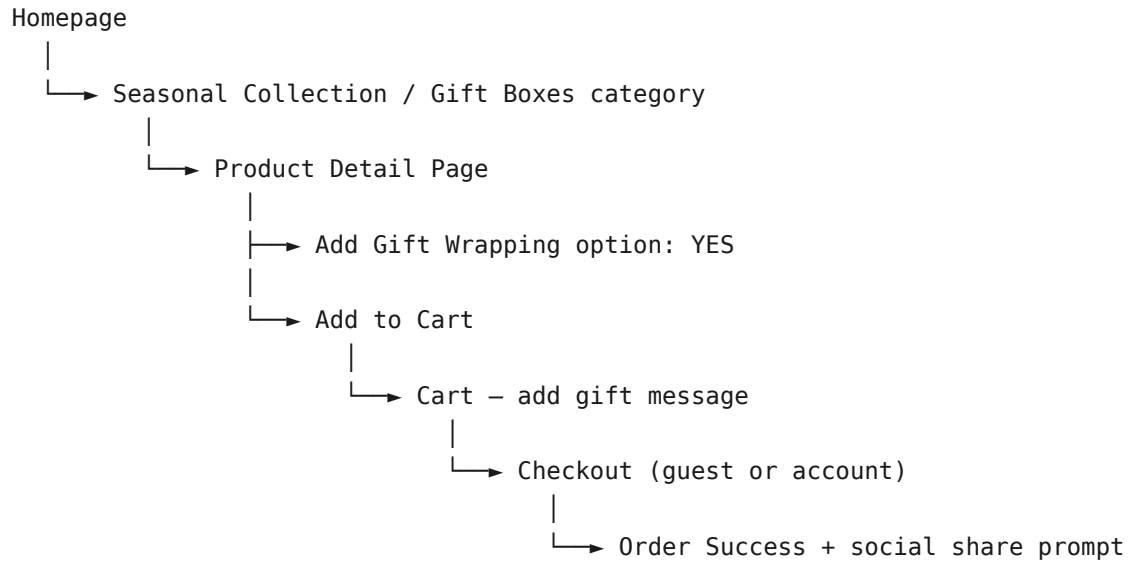

The checkout process follows a linear, four-step funnel designed to minimise abandonment while collecting all information necessary for order fulfillment.

CART → [STEP 1] Address → [STEP 2] Shipping → [STEP 3] Payment → [STEP 4] Review → ORDER SUCCESS

- |
- |
- | Guest checkout available at Step 1 (email capture only)
- |
- | Account creation offered post-order on Success page
- |

└─ Persistent cart saved for 30 days (cookie / session)

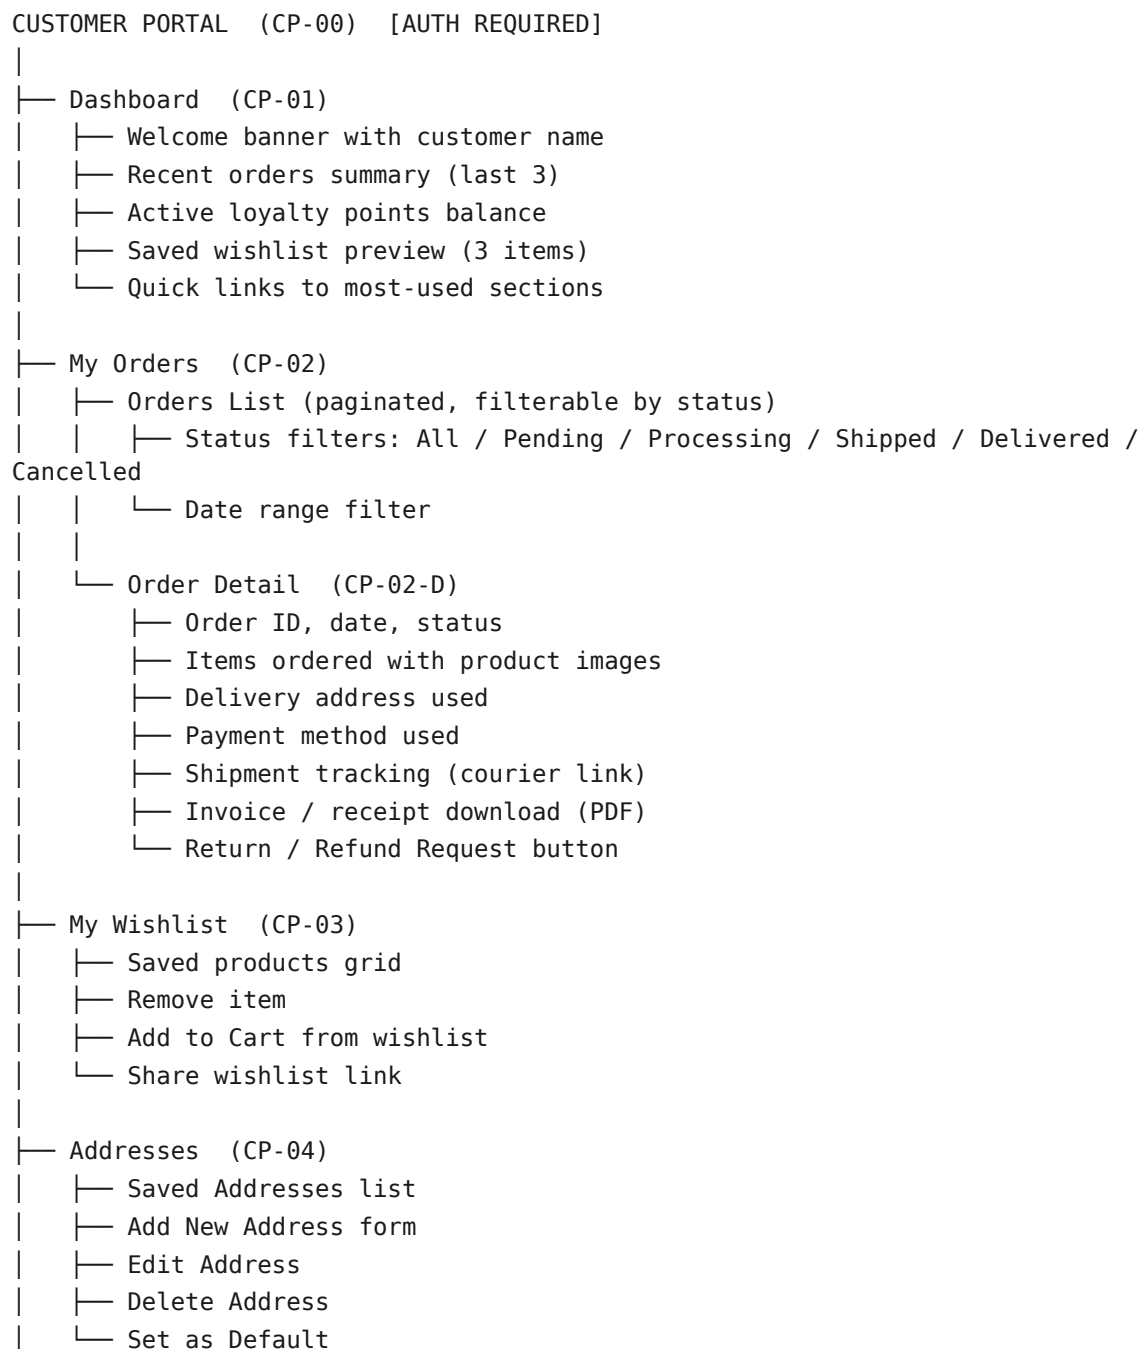

4.4 User Journey — Gift Purchase Flow

Chapter 5 | Customer Portal Sitemap

The Customer Portal is the authenticated, self-service area of the THALF website. It enables registered customers to manage their account, track orders, maintain wishlists, and update personal information — reducing inbound support volume while increasing customer satisfaction and repeat purchase likelihood.

5.1 Portal Sitemap Diagram

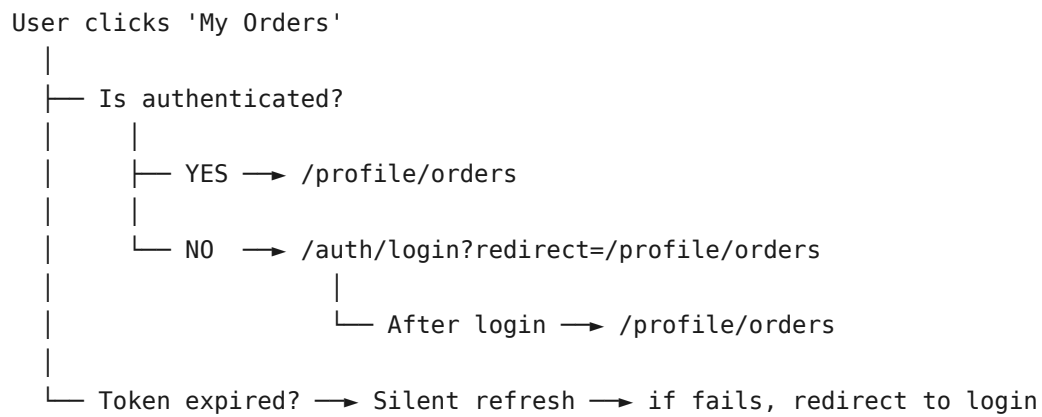

- └ Profile (CP-05)
 - └ Personal Information
 - └ Name, email, phone
 - └ Date of birth (for birthday offer)
 - └ Gender (optional)
 - └ Change Password
 - └ Email Preferences

CP-04	Saved Addresses	/profile/addresses	Required	P0
CP-04-N	Add Address	/profile/addresses/new	Required	P0
CP-05	Profile Settings	/profile/settings	Required	P0
CP-06	Notifications	/profile/notifications	Required	P2

5.3 Authentication Gate Flow

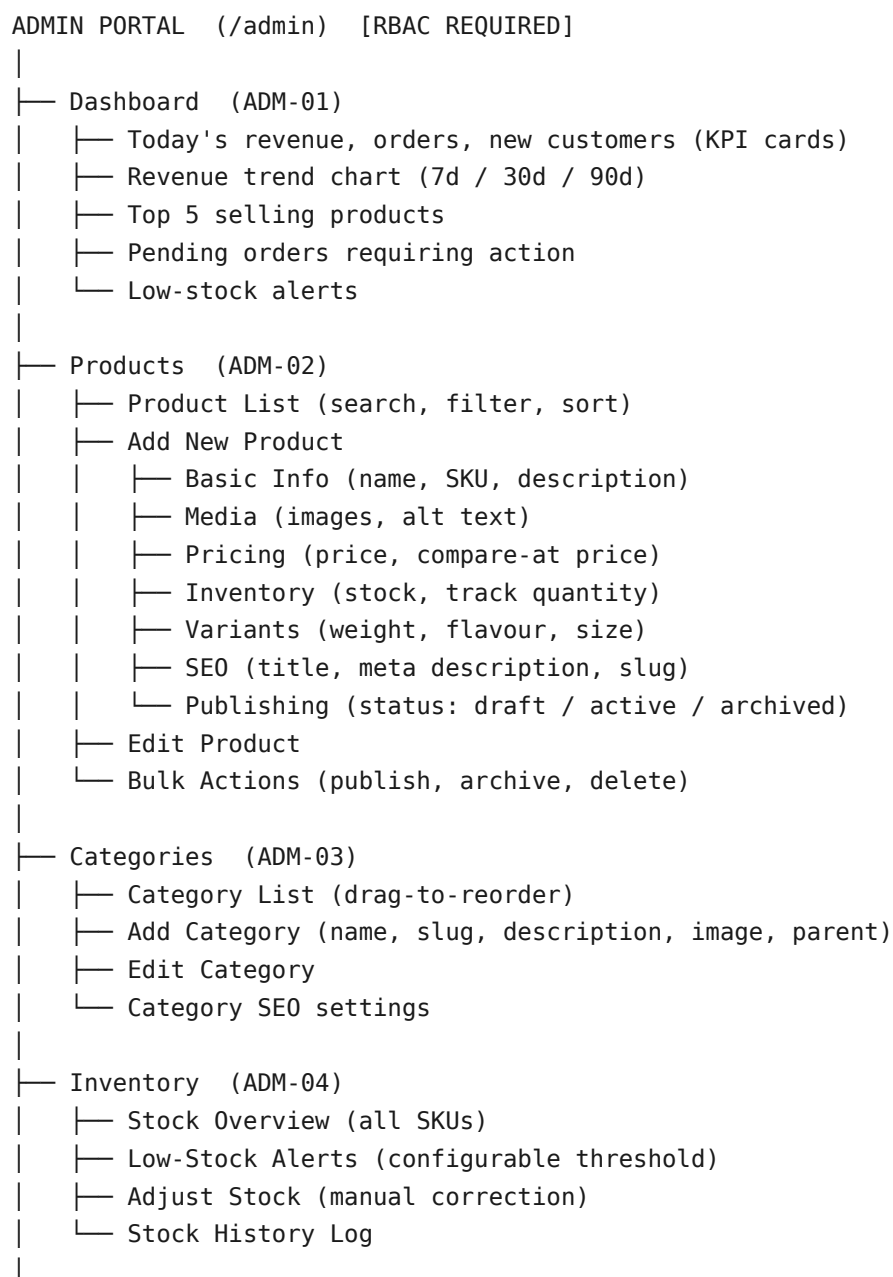

Unauthenticated users who attempt to access portal pages are redirected to the login page with a return URL parameter. After successful authentication they are redirected back to their originally requested page.

Chapter 6 | Admin Portal Sitemap

The Admin Portal is the internal management interface used by THALF operations staff to manage the full lifecycle of the e-commerce business: catalogue management, order processing, customer records, promotions, and business analytics. It operates on a separate subdomain (/admin) with role-based access control (RBAC).

6.1 Admin Sitemap Diagram

Coupons	Full CRUD	Full CRUD	No access	View only
Reviews	Full	Approve / Reject	No access	No access
Analytics	Full	View only	No access	No access
Settings	Full	Limited	No access	No access

Chapter 7 | Navigation Strategy

Navigation is the primary wayfinding system of the THALF website. It must balance discovery (helping new visitors explore the catalogue) with efficiency (enabling returning customers to reach known destinations in the fewest possible taps). The navigation strategy is differentiated by device context.

7.1 Top Navigation Bar (Desktop & Mobile Header)

The top navigation bar is persistent across all public pages except checkout (where it is suppressed to reduce distraction). It contains:

Element	Desktop Behaviour	Mobile Behaviour
Logo / Brand Mark	Left-aligned, links to homepage	Centred, links to homepage
Primary Nav Links	Horizontal: Shop, About, Contact	Hidden; accessed via hamburger menu
Search Icon	Always visible; expands to search bar on click	Always visible; opens full-screen overlay
Wishlist Icon	Visible with item count badge	Visible with badge
Cart Icon	Visible with item count badge; mini-cart on hover	Visible with badge; links to /cart
Account Icon	Links to profile or login; dropdown menu on auth	Links to profile or login
WhatsApp Button	Optional; right side	Persistent floating button (not in header)

7.2 Main Navigation — Desktop (Mega Menu)

On desktop, the Shop navigation item triggers a mega-menu that presents all categories and featured collections in a single two-column layout, reducing clicks to product discovery.

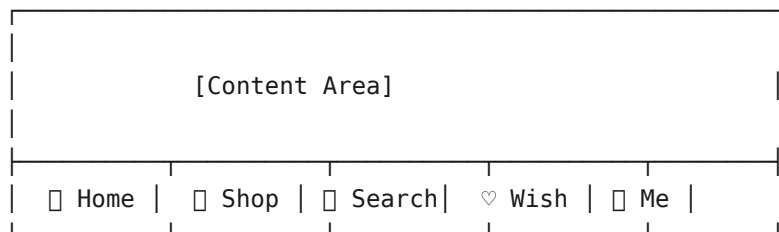

SHOP [hover/click]

CATEGORIES	FEATURED
------------	----------

○ Chocolate Bars	★ Seasonal Collection
○ Truffles	★ Gift Boxes
○ Gift Boxes	★ New Arrivals
○ Seasonal Collection	
○ All Products	[Hero image – product]

7.3 Mobile Navigation — Bottom Navigation Bar

On mobile, the primary navigation is the bottom navigation bar, anchored at the bottom of the viewport for thumb reachability. It contains five items representing the most frequent destinations for THALF customers.

Bottom nav tab behaviour:

Tab	Icon	Destination	Active State
Home	House icon	/	Gold underline indicator
Shop	Shopping bag icon	/shop	Gold underline indicator
Search	Magnifying glass	Search overlay (full screen)	Overlay open state
Wishlist	Heart icon (with badge)	/wishlist	Gold underline; badge shows count
Account	Person icon	/profile/dashboard or /auth/login	Gold underline; avatar on auth

7.4 Mobile Hamburger Menu (Secondary Navigation)

The hamburger menu (top-left on mobile) provides access to secondary navigation items not in the bottom bar: About, Contact, FAQ, Policies. It slides in from the left as a full-height drawer.

[THALF Logo] [× Close]

Shop

- > Chocolate Bars
- > Truffles
- > Gift Boxes
- > Seasonal Collection

About

Contact

FAQ

[WhatsApp Support](#)[Language: EN](#) | [AR](#)[Privacy](#) · [Shipping](#) · [Refunds](#)

7.5 Sticky Cart Bar (Mobile)

When a customer has items in their cart, a sticky bar appears above the bottom navigation bar showing the item count and cart total, providing a persistent CTA to proceed to checkout without requiring the customer to navigate to the cart page first.

3 items | AED 285.00 [VIEW CART ►]

7.6 Breadcrumb Navigation

Breadcrumbs are displayed on all product and category pages, providing hierarchical context and enabling backward navigation. They are implemented as schema.org BreadcrumbList structured data for SEO.

Page	Breadcrumb Trail
Chocolate Bars category	Home / Shop / Chocolate Bars
Product detail	Home / Shop / Truffles / Dark Chocolate Truffle Box
Gift Boxes	Home / Shop / Gift Boxes
About Our Story	Home / About / Our Story
FAQ	Home / FAQ

Page	Breadcrumb Trail
Privacy Policy	Home / Policies / Privacy Policy

7.7 Footer Navigation

The footer appears on all pages except checkout. It provides access to secondary navigation, trust signals, and legal pages.

[THALF Logo] Handcrafted in the UAE. Made with love.			
SHOP	COMPANY	SUPPORT	FOLLOW US
Chocolate Bars	Our Story	FAQ	Instagram

Seasonal	Careers	Returns	WhatsApp Support
		Track Order	
[Visa] [Mastercard] [Apple Pay] [Google Pay] Payment secured by © 2026 THALF. All rights reserved. Privacy · Terms · Shipping			

Chapter 8 | URL Architecture

The URL architecture for THALF follows SEO best practices and IA hierarchy principles. Every URL is human-readable, keyword-inclusive, lowercase, and uses hyphens (not underscores) as word separators. URLs are designed to be memorable, typeable, and shareable.

8.1 URL Design Rules

- All lowercase — no camelCase, no capitals
- Hyphens as word separators — never underscores
- No trailing slashes on non-directory pages
- Maximum 60 characters per URL segment for readability
- No dates or IDs in public-facing product/category URLs
- Query parameters restricted to search (?q=), filters (?category=), and pagination (?page=)
- Canonical tags on all paginated, filtered, and parameter-appended pages

8.2 Complete URL Map

Section	URL	Notes
Homepage	/	Root; canonical
Shop landing	/shop	Category aggregation page
Chocolate Bars	/shop/chocolate-bars	Keyword-rich category
— Milk Bars	/shop/chocolate-bars/milk	Sub-category facet
— Dark Bars	/shop/chocolate-bars/dark	Sub-category facet
Truffles	/shop/truffles	Primary category
— Classic Truffles	/shop/truffles/classic	Sub-category
Gift Boxes	/shop/gift-boxes	High-value category
Seasonal Collection	/shop/seasonal-collection	Updated seasonally

Section	URL	Notes
All Products	/shop/all	Paginated: /shop/all? page=2
Product Page	/product/[product-slug]	e.g. /product/dark-chocolate-truffle-box
Search Results	/search?q=[query]	e.g. /search?q=dark+chocolate
Search + Filter	/search?q=truffle&category=truffles	Canonical: /shop/truffles
Cart	/cart	No indexing (noindex)
Checkout	/checkout	No indexing (noindex)
Checkout Step 2	/checkout/shipping	
Checkout Step 3	/checkout/payment	
Order Success	/order/success	noindex; order ID via param
About	/about	Redirects to /about/our-story
Our Story	/about/our-story	
Our Craft	/about/our-craft	
Sourcing	/about/sourcing	
Contact	/contact	
FAQ	/faq	
Privacy Policy	/policies/privacy	
Shipping Policy	/policies/shipping	
Refund Policy	/policies/refunds	
Terms & Conditions	/policies/terms	

Section	URL	Notes
Login	/auth/login	noindex
Register	/auth/register	noindex
Profile Dashboard	/profile/dashboard	noindex; auth required
My Orders	/profile/orders	noindex; auth required
Order Detail	/profile/orders/[order-id]	noindex; auth required
Wishlist	/profile/wishlist	noindex; auth required
Addresses	/profile/addresses	noindex; auth required
Profile Settings	/profile/settings	noindex; auth required
Admin	/admin	Separate auth; noindex

8.3 Product Slug Convention

Product slugs are generated automatically from the product name with the following transformation rules:

Input: 'Dark Chocolate Truffle Box – 12 pieces'

Output: 'dark-chocolate-truffle-box-12-pieces'

Rules:

1. Convert to lowercase
2. Replace spaces and special characters with hyphens
3. Remove consecutive hyphens
4. Strip leading/trailing hyphens
5. Max 80 characters; truncate at word boundary if exceeded

8.4 Redirect Strategy

Scenario	Redirect Type	Example
Old URL after site migration	301 Permanent	/chocolates/bars → /shop/chocolate-bars
Seasonal collection (off-season)	302 Temporary	/shop/valentine-collection → /shop/gift-boxes
Deleted product	301 to category	/product/old-product →

Scenario	Redirect Type	Example
		/shop/truffles
Non-canonical search URL	Canonical tag (no redirect)	/search?q=truffle+box → canonical: /shop/gift-boxes
Www to non-www	301 Permanent	www.thalf.com → thalf.com
HTTP to HTTPS	301 Permanent	http:// → https://

8.5 Internal Linking Strategy

A deliberate internal linking structure distributes page authority across the site and reinforces topical depth for SEO. The following linking rules apply:

Source Page	Links To	Purpose
Homepage	All 4 top categories, Featured products, Seasonal campaign	Authority distribution; discovery
Category page	All sub-categories, 8-12 products, Related category, Blog (future)	Depth crawling; category SEO
Product page	Parent category (breadcrumb), 4-6 related products, Gift boxes category	Cross-sell; crawl depth
Blog post (future)	Relevant product pages, category pages	Commercial page authority
FAQ	Policies pages, Contact, Product categories	Trust flow; support deflection
Order Success	Homepage, Shop, Customer Portal	Re-engagement post-purchase
Footer	All major categories, all policy pages, Contact, About	Global link equity

Chapter 9 | Search Architecture

Search is a critical discovery pathway for THALF customers. The search system must handle natural language queries, partial matches, occasion-based queries, and ingredient-based queries with equal facility. The architecture is designed to return relevant, visually rich results within 300ms.

9.1 Search Entry Points

- Header search icon (all pages) — expands to full-width search bar
- Mobile search tab in bottom navigation — opens full-screen overlay
- Search box on /search results page
- 404 error page — 'Try searching for it' CTA

9.2 Search Features

Feature	Description	Priority
Autocomplete / Typeahead	Instant suggestions as user types (≥ 2 characters). Shows products, categories, and popular searches.	P0
Full-text search	Searches product name, description, ingredients, tags, and category names.	P0
Typo tolerance	Handles common misspellings: 'trufel', 'chocolat', 'pralin'	P0
Synonym matching	Maps synonyms: 'praline' → truffle; 'gift' → gift boxes; 'Eid' → seasonal	P1
Occasion search	Maps intent queries: 'birthday gift', 'anniversary', 'for her' → Gift Boxes	P1
Zero-results handling	Shows curated recommendations, top-	P0

Feature	Description	Priority
	sellers, and seasonal picks when no results found	
Search analytics	Tracks every query, zero-result queries, and click-through rate by result	P1
Recent searches	Persists last 5 searches in localStorage for quick recall	P2
Popular searches	Displays trending/popular terms on empty search state	P2

9.3 Filters & Facets

The following filters are available on category and search results pages. Filters are applied without page reload (AJAX). Active filters are shown as removable chips above results.

Filter	Type	Options
Category	Multi-select checkbox	Chocolate Bars, Truffles, Gift Boxes, Seasonal
Flavour Profile	Multi-select checkbox	Milk, Dark, White, Ruby, Caramel, Pistachio, Hazelnut, Sea Salt
Occasion	Multi-select checkbox	Birthday, Anniversary, Eid, Valentine's, Corporate, Self-treat
Price Range	Dual-handle slider	AED 0 – AED 1,000+
Box Size / Pieces	Single-select	Single, 6-piece, 12-piece, 24-piece, 48-piece+
Dietary	Multi-select checkbox	Vegan, Dairy-free, Gluten-free, Sugar-free, Nut-free
Availability	Toggle	In Stock Only

9.4 Sorting Options

Sort Option	Default?	Logic
Featured	Yes (on category pages)	Manual curated ranking by merchandiser
Relevance	Yes (on search results)	Search score × review rating × sales velocity
Newest Arrivals	No	Product creation date descending
Price: Low to High	No	Price ascending
Price: High to Low	No	Price descending
Best Sellers	No	Units sold (last 30 days) descending
Highest Rated	No	Average review rating descending (min 5 reviews)

9.5 Related Products Algorithm

The 'You May Also Like' section on product pages uses the following logic to surface recommendations:

PRIORITY 1: Same category + overlapping flavour tags
PRIORITY 2: Frequently bought together (co-purchase data)
PRIORITY 3: Same price range ($\pm 30\%$) in any category
PRIORITY 4: Seasonal collection if seasonal product viewed
FALLBACK : Top 4 best-sellers in same category

9.6 Search SEO Considerations

- Search result pages (/search?q=...) are excluded from indexing via noindex meta tag
- Category pages serve as the indexable landing pages for keyword clusters
- Autocomplete queries are not crawlable by search engines
- Popular search landing pages (e.g., /shop/truffles) include rich Schema.org markup

Chapter 10 | Content Hierarchy

Content hierarchy defines the priority order of information presented on each page. It is the primary input to visual design — the highest-priority content receives the greatest visual weight, most prominent placement, and earliest position in the reading flow. The hierarchy below reflects THALF's business priorities and customer decision-making psychology.

10.1 Homepage

Priority	Content Block	Purpose
P1	Hero banner — seasonal campaign or brand statement	Brand impact; drive click to shop
P2	Featured collection / new arrival highlight	Surface best sellers or seasonal items
P3	Category grid (4 categories with editorial imagery)	Enable product discovery by type
P4	Trust signals — handmade, natural ingredients, UAE-crafted	Overcome purchase hesitation
P5	Bestsellers carousel	Social proof; shortcut to popular products
P6	Brand story snippet + CTA to /about/our-story	Emotional connection; brand depth
P7	Gift set promotion (occasion-based)	Increase AOV; promote gift category
P8	Customer reviews / UGC block	Social proof; trust
P9	Instagram feed (if UGC available)	Social proof; visual richness
P10	Email signup (newsletter / offers)	Customer acquisition; lifecycle marketing

10.2 Product Detail Page

Priority	Content Block	Purpose
P1	Product image gallery (5–8 images: product, detail, lifestyle, ingredients)	Purchase decision driver #1
P2	Product name, flavour type, short description (2 lines)	Immediate product identification
P3	Price (and compare-at price if discounted)	Commercial transparency
P4	Variant selector (size / flavour / gift wrapping)	Personalisation; AOV increase
P5	Add to Cart CTA (sticky on mobile scroll)	Conversion action
P6	Delivery estimator (postcode entry)	Reduce pre-checkout anxiety
P7	Long-form description, ingredients, allergens	Informed purchase decision
P8	Customer reviews (star rating + written reviews)	Social proof
P9	Add to Wishlist (secondary CTA)	Retention; return visits
P10	Related products carousel	Cross-sell; reduce exit rate

10.3 Category / Shop Page

Priority	Content Block	Purpose
P1	Page title + category hero image / banner	Context; editorial brand tone
P2	Sub-category filter pills (quick access)	Rapid refinement
P3	Product grid (min 8 products, 2-col mobile / 3-col desktop)	Browsing; choice
P4	Sort dropdown	Control; personalised

Priority	Content Block	Purpose
		browsing
P5	Active filters chips + clear all	Transparency; undo friction
P6	Filter panel (sidebar desktop / bottom sheet mobile)	Discovery; intent matching
P7	Pagination / infinite scroll toggle	Continuity of browsing flow
P8	SEO content block (200-300 words, below fold)	Keyword signals for indexing

10.4 Cart Page

Priority	Content Block	Purpose
P1	Cart item list with images, name, quantity, price	Review before commit
P2	Subtotal + estimated delivery cost	Financial clarity
P3	Proceed to Checkout CTA (prominent, above fold mobile)	Conversion
P4	Promo code entry	Incentive fulfilment
P5	Gift message entry	Increase gift category conversion
P6	'You may also like' cross-sell (3-4 items)	AOV increase
P7	Trust signals (secure payment, free shipping threshold)	Reduce abandonment
P8	Continue shopping link	Reduce cart abandonment

10.5 Checkout Pages

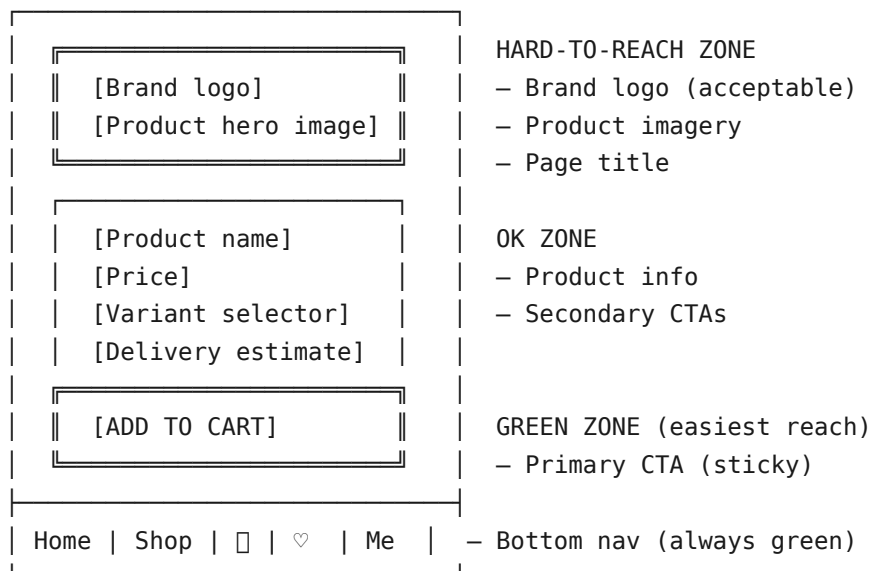

Priority	Content Block	Purpose
P1	Progress indicator (Step X of 4)	Reduce uncertainty about process length
P2	Form fields (address / shipping / payment)	Data collection
P3	Order summary sidebar (or collapsible on mobile)	Constant purchase reinforcement
P4	Continue / Place Order CTA	Conversion
P5	Trust signals (SSL, payment logos)	Last-mile trust
P6	Guest checkout option	Remove account-creation barrier

Chapter 11 | Mobile-First Navigation

As a mobile-first e-commerce experience, THALF's navigation patterns are designed for one-hand use on a 6-inch smartphone screen. Every interaction has been evaluated against the thumb-zone model, iOS and Android platform conventions, and THALF's luxury brand standards.

11.1 Thumb Zone Analysis

The thumb zone model (Steven Hoober, 2011; updated for modern device sizes) divides the smartphone screen into three zones based on natural thumb reach. THALF's UI places high-frequency interactive elements in the Green Zone.

11.2 Bottom Navigation Bar

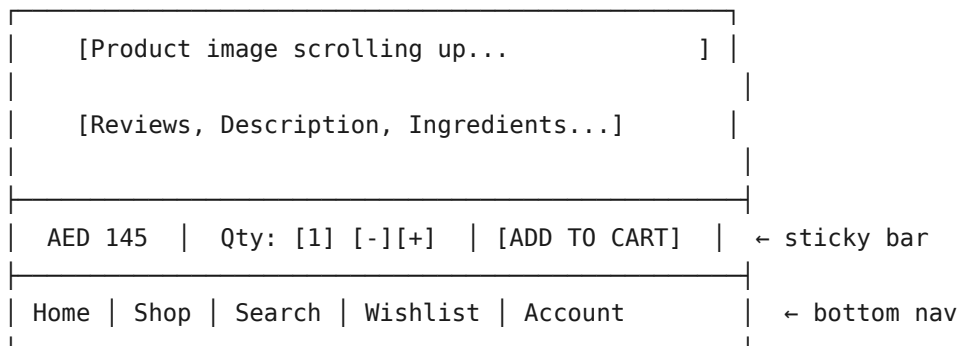

The persistent bottom navigation is the most important navigation component on THALF mobile. Design and implementation requirements:

- Height: 56dp minimum (iOS HIG recommendation: 49pt)
- Icon size: 24dp with 4dp label text
- Active state: THALF gold colour (#C8961E) + gold underline indicator
- Safe area inset: padding-bottom accounts for iPhone home indicator (34pt)

- Tab order: Home | Shop | Search | Wishlist | Account — ordered by frequency of use
- Cart not in bottom nav — accessed via persistent cart bar or cart icon in header

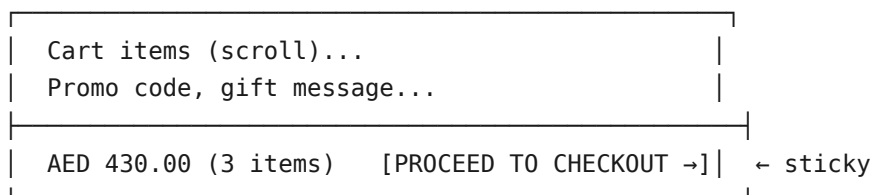

11.3 Sticky Add to Cart (Product Page)

On the product detail page, the Add to Cart button becomes sticky and anchors above the bottom navigation bar when the user scrolls past the initial product CTA. This ensures the conversion action is always accessible regardless of how far the customer has scrolled to read descriptions or reviews.

11.4 Sticky Checkout CTA (Cart Page)

On the cart page, the 'Proceed to Checkout' button is fixed at the bottom of the viewport, always visible without requiring the customer to scroll to the bottom of their cart. The cart summary (item count and total) is shown inline within the sticky bar.

11.5 Floating WhatsApp CTA

A floating WhatsApp button is anchored to the bottom-right corner of the screen on all pages except checkout. It appears above the bottom navigation bar and provides instant access to customer support. The button displays a speech

bubble icon with the WhatsApp green colour, paired with a subtle pulsing animation to draw attention without being intrusive.

- Position: fixed, bottom 72dp (above bottom nav), right 16dp
- Size: 52×52dp with drop shadow
- Behaviour: taps open WhatsApp with pre-filled message: 'Hi THALF, I need help with my order'
- Visibility: shown on all pages except /checkout steps 1–4

11.6 Mobile Gesture Interactions

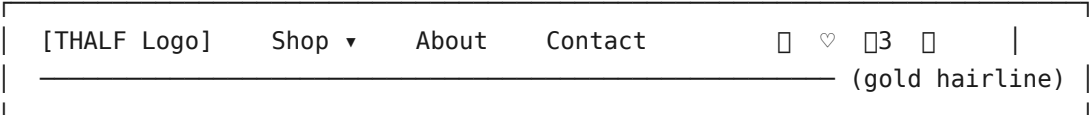

Interaction	Gesture	Context
Browse next product image	Swipe left / right	Product image gallery
Dismiss bottom sheet (filters)	Swipe down or tap outside	Filter panel
Pull-to-refresh	Pull down	Category, search, order history pages
Close mobile menu (drawer)	Swipe left or tap overlay	Hamburger nav drawer
Add to wishlist	Long-press product card	Category grid, related products
Dismiss toast notification	Swipe up	Cart confirmation, error messages

Chapter 12 | Desktop Navigation

While THALF is mobile-first, the desktop experience must reflect the same premium positioning with additional surface area and interaction richness available on larger screens. Desktop-specific navigation patterns layer on top of the mobile foundation without replacing it.

12.1 Sticky Header

The desktop header becomes sticky after the user scrolls 80px from the top. In its sticky state, the header reduces height (from 80px to 56px), the hero logo scales down, and a subtle background blur + border-bottom appear to separate it from the content below.

12.2 Mega Menu — Shop

The Shop nav item opens a full-width mega-menu panel on hover (desktop) or click (keyboard). The panel contains category links, sub-category links, and a featured editorial image panel.

12.3 Mini-Cart (Desktop)

On desktop, hovering or clicking the cart icon opens a flyout mini-cart panel from the right side of the header. It displays the last 3 cart items with images, quantities, and a Checkout CTA — allowing customers to proceed to checkout without navigating away from their current page.

Your Cart (3 items)		
[img]	Dark Truffle Box×1	
	AED 145.00	[x]
[img]	Milk Choc Bar ×2	
	AED 90.00	[x]
Subtotal: AED 235.00		
[VIEW CART] [CHECKOUT]		

12.4 Desktop Footer

The footer on desktop uses a four-column grid layout with generous whitespace and brand-consistent typography. It is not sticky; it appears at the natural end of page content.

Column 1: Brand	Column 2: Shop	Column 3: Company	Column 4: Support
THALF Logo	Chocolate Bars	Our Story	FAQ
Brand tagline	Truffles	Our Craft	Contact Us
Social links row	Gift Boxes	Sourcing	Shipping Info
Newsletter signup	Seasonal Collection	Careers	Returns Policy
Payment logos	Bestsellers	Press	Track My Order

12.5 Desktop Layout Grid

The desktop layout is based on a 12-column grid with a max-width of 1440px and 24px gutters. Content is centred with horizontal padding that scales with viewport width.

Breakpoint	Viewport Width	Columns	Gutter	Max Content Width
Mobile S	< 375px	4	16px	343px
Mobile M	375–767px	4	16px	343px
Tablet	768–1023px	8	24px	720px
Desktop S	1024–1279px	12	24px	976px
Desktop M	1280–1439px	12	32px	1216px
Desktop L	≥ 1440px	12	32px	1376px

Chapter 13 | Future Scalability

The THALF IA is designed to accommodate significant future growth without requiring structural redesign. The following sections document planned and anticipated expansion vectors, their IA implications, and recommended URL and navigation placements.

13.1 Corporate Gifting Portal

A dedicated corporate gifting section serves B2B customers — HR teams, event planners, and corporate buyers — who require volume ordering, custom branding, and invoicing.

Item	Detail
URL	/corporate-gifting
Nav placement	Primary nav (desktop), hamburger menu (mobile), footer column 2
Pages required	Landing page, Custom Order Enquiry form, Corporate Account portal
IA impact	New top-level section; does not disrupt existing hierarchy
Phase	Phase 2

HOME

- └ Corporate Gifting (/corporate-gifting)
 - └ How It Works
 - └ Request Custom Quote (form)
 - └ Packaging Options
 - └ Corporate Account Login

13.2 Subscription Boxes

A recurring subscription product enables monthly chocolate discovery boxes for loyal customers, providing predictable recurring revenue.

Item	Detail
URL	/subscribe or /shop/subscription-box

Item	Detail
Nav placement	Shop mega-menu 'Collections' column; homepage hero campaign slot
Pages required	Subscription landing, Plan selector, Subscription management in customer portal
IA impact	New shop sub-section + customer portal extension (My Subscriptions)
Phase	Phase 2–3

13.3 Blog & Editorial Content

A content marketing blog increases organic search surface area and builds brand authority around chocolate culture, cacao origins, recipes, and gifting guides.

Item	Detail
URL	/journal or /blog
Nav placement	Desktop: secondary nav or footer; Mobile: hamburger menu
Categories	Recipes, Behind the Craft, Gift Guides, Chocolate Education, News
Article URL	/journal/[article-slug]
IA impact	New top-level section; links to product pages; supports SEO ecosystem
Phase	Phase 2

13.4 Recipes Section

A recipe collection featuring THALF chocolate as an ingredient drives inspirational purchase occasions and positions the brand as a culinary authority.

Item	Detail
URL	/recipes / /recipes/[recipe-slug]
Cross-links	Each recipe links to specific THALF

Item	Detail
	products used; CTA to add to cart
IA impact	Can be a sub-section of Blog/Journal or standalone
Phase	Phase 3

13.5 Store Locator

As THALF expands into physical retail and stockist partnerships, a store locator enables customers to find nearby stockists and flagship stores.

Item	Detail
URL	/find-us or /store-locator
Features	Map view, list view, postcode search, filter by city
Nav placement	Footer; Contact page link
Phase	Phase 2 (if physical retail exists)

13.6 Wholesale Portal

A dedicated wholesale section serves café partners, hotel groups, and retail stockists.

Item	Detail
URL	/wholesale
Access model	Gated: application form → approval → wholesale account login
Features	Wholesale pricing catalogue, minimum order quantities, bulk ordering
Phase	Phase 3

13.7 International Shipping & Localisation

GCC and international expansion requires localisation of currency, language, and shipping options.

Expansion Item	IA Implication
Arabic language (AR)	Dual-language with RTL layout; URL structure unchanged, lang param: /shop?lang=ar or hreflang alternate
Currency: AED, SAR, KWD, USD	Geo-detection + manual selector; prices stored per market in CMS
International shipping zones	Shipping policy page expanded; checkout dynamically loads available shipping methods by country
Market-specific landing pages	e.g., /sa (Saudi Arabia), /kw (Kuwait) — 301-friendly if discontinued

13.8 Scalability Principles Summary

Principle	How It's Applied
Additive hierarchy	New sections (Blog, Subscriptions, Corporate) add to existing nav without restructuring it
URL namespace reservation	/journal, /subscribe, /wholesale, /corporate-gifting are reserved; no current pages use these paths
Customer portal extensibility	Portal menu has space for 'Subscriptions', 'Loyalty Points', 'Gift Cards' tabs
Admin extensibility	Admin sidebar has reserved positions for 'Subscriptions', 'Wholesale', 'Blog' modules
Data model readiness	Product schema supports subscription intervals, wholesale pricing tiers, and multi-market pricing from launch

Chapter 14 | Recommendations

The following recommendations are specific to THALF and reflect industry best practices for premium mobile-first e-commerce. They are organised by domain and prioritised by impact and implementation effort.

14.1 SEO Recommendations

#	Recommendation	Priority	Effort
S01	Implement schema.org Product markup on all product pages (name, price, availability, review aggregate)	Critical	Low
S02	Implement schema.org BreadcrumbList on all category and product pages	Critical	Low
S03	Create unique, keyword-rich meta titles and descriptions for all indexable pages — no duplicates	Critical	Low
S04	Ensure all images have descriptive alt text: 'THALF Dark Chocolate Truffle Box — 12 pieces'	High	Low
S05	Submit XML sitemap (auto-generated) to Google Search Console on launch	Critical	Low
S06	Implement hreflang for Arabic/English once bilingual support is added	High	Medium
S07	Target 2,000+	High	Medium

#	Recommendation	Priority	Effort
	word SEO content blocks on top category pages (below-fold, human-written)		
S08	Build internal links from FAQ answers to relevant product category pages	Medium	Low
S09	Register THALF on Google Business Profile for local SEO (Dubai-based searches)	High	Low
S10	Monitor Core Web Vitals monthly via Google Search Console; target LCP < 2.5s	High	Low

14.2 Accessibility Recommendations

#	Recommendation	WCAG Criterion	Priority
A01	All interactive elements (buttons, links, inputs) have visible focus indicators	2.4.7	Critical
A02	Colour contrast ratio $\geq 4.5:1$ for all body text; $\geq 3:1$ for large text and UI components	1.4.3 / 1.4.11	Critical
A03	All images have descriptive alt text; purely decorative images have alt=""	1.1.1	Critical
A04	Form fields have visible labels (not placeholder-only)	1.3.1	Critical
A05	Error messages identify the specific	3.3.1 / 3.3.3	Critical

#	Recommendation	WCAG Criterion	Priority
	field in error and suggest correction		
A06	Mobile touch targets $\geq 44 \times 44$ pt (Apple) / 48×48 dp (Google)	2.5.5 (AAA target)	High
A07	Page titles are unique and descriptive on every page	2.4.2	High
A08	Keyboard navigation works correctly through all interactive elements in logical order	2.1.1	High
A09	Checkout forms support browser autofill (autocomplete attributes set correctly)	1.3.5	High
A10	Provide skip-to-main-content link for keyboard and screen reader users	2.4.1	Medium

14.3 Performance Recommendations

#	Recommendation	Target	Impact
P01	Use next-gen image formats (WebP / AVIF) with fallback JPG for all product images	Image size -60%	Critical
P02	Implement lazy loading for all below-fold images	LCP < 2.5s	Critical
P03	Serve images in responsive sizes using srcset (product grid:	Bandwidth -40%	Critical

#	Recommendation	Target	Impact
	400px; hero: 800px; retina: 2x)		
P04	Preload hero image on every page that has a visual hero	LCP -0.5s	High
P05	Defer non-critical JavaScript (chat widget, analytics, social embeds)	TTI < 3.5s	High
P06	Implement CDN for static assets and media (Cloudflare or AWS CloudFront)	TTFB < 200ms	Critical
P07	Enable HTTP/2 and HTTPS on all environments from day one	Performance baseline	Critical
P08	Cache product catalogue and category pages at CDN level (60-second TTL with stale-while-revalidate)	Server load -70%	High
P09	Set up Lighthouse CI in deployment pipeline; block deploys if performance score < 80	Regression prevention	Medium
P10	Minimise third-party scripts; audit quarterly; remove unused scripts	TBT reduction	Medium

14.4 Navigation Recommendations

#	Recommendation	Rationale
N01	Limit primary navigation to 5 top-level items maximum (incl. Shop)	Hick's Law: more choices increase decision time; 5 is the cognitive limit for instant recognition

#	Recommendation	Rationale
N02	Never hide the Search function — it should be a prominent, always-visible icon	35–40% of e-commerce users go directly to search; hiding it loses these high-intent customers
N03	Display cart item count badge in real-time after every add-to-cart action	Provides immediate feedback; reduces uncertainty that add-to-cart worked
N04	Retain cart state for minimum 30 days for authenticated users (90 days preferred)	Cart abandonment recovery; returning customer conversion
N05	Show a 'Back to results' link on product pages reached from category/search	Reduces bounce; enables 'pogo-sticking' as a natural browsing pattern
N06	Implement 'Continue as Guest' prominently at checkout — not buried below login form	Forced account creation is the #1 checkout abandonment cause
N07	On mobile, avoid navigation items that require precise taps (dropdowns, multi-level menus)	Motor precision on touch is lower; use full-screen drawers and bottom sheets instead
N08	Animate page transitions on mobile (slide-in, fade) to reinforce spatial navigation model	Creates sense of place; reduces disorientation on deep navigation paths

14.5 Conversion Optimisation Recommendations

#	Recommendation	Rationale
C01	Show 'Free shipping on orders over AED X' prominently in header and cart	Free shipping is the #1 incentive for online purchase decision
C02	Display stock scarcity signal for low-stock items: 'Only 3 left'	FOMO increases urgency; effective for premium gift items
C03	Implement cart	Industry average recovery

#	Recommendation	Rationale
	abandonment email sequence (1h, 24h, 72h post-abandon)	rate 5–15% of abandoned carts
C04	Surface product reviews prominently on PDP above the fold on mobile	Products with ≥ 5 reviews convert at 4× rate of products with no reviews
C05	Enable Apple Pay and Google Pay in checkout — one-tap payment	Reduces mobile checkout friction by up to 40%
C06	Show a progress bar in checkout ('Almost there — 1 step to go')	Reduces abandonment anxiety; sets clear expectations
C07	Offer gift-wrapping as a paid upsell on product pages and in cart	Increases AOV for gift occasions; premium positioning reinforcement
C08	Implement back-in-stock notification for sold-out products	Captures demand that would otherwise be lost; reduces permanent bounce

Final Note — Document Governance

This document is a living architecture specification. It should be updated whenever:

- ✦ A new product category or page type is introduced
- ✦ The navigation structure changes
- ✦ A new user role or portal section is added
- ✦ The URL structure for any existing page changes (with redirect mapping)

Changes should be versioned in the Revision History table and communicated to all teams working from this document before implementation begins.

Document Owner: Mohammed Unaize

Next Scheduled Review: Prior to UI Design Kick-off
